HYBRID EXCHANGE

# One home for connected execution.

A dedicated exchange experience for individual traders, business desks, liquidity providers and applications across the Hybrid ecosystem.

## Available to explore

Hybrid ID sign-in, public asset discovery, mapped USD references and personal/business demonstrations.

The 14 October 2026 registry snapshot includes 589 deployments across 17 networks. Deployment count is not a count of live trading pairs.

## Product direction

Spot trading and OTC first. Yield swaps, tokenized equities and barrier products follow their own eligibility and settlement gates.

TradingView daily-history charts and browser watchlists are available. BTC and Ethereum mainnet have live USD composite references. Their intraday charts show observed midpoints by minute.

## Release boundary

Live trading and funding are not enabled. Demonstrations use fictional funds. Private Rust Testnet foundations do not establish customer trading readiness.

Exchange owns execution; Core/MPC retain balances and custody; Chain/Explorer provide the evidence path.
