HYBRID EXCHANGE

One home for execution.

A dedicated exchange for individuals, businesses and applications across the Hybrid ecosystem.

Discover

Explore the Chain asset universe with exact network identities and sourced price references.

Trade

A planned execution layer for spot markets, OTC requests and connected financial products.

Connect

One Hybrid identity, dedicated Exchange authority and a path to durable trade evidence.

THE CLIENT EXPERIENCE

From market discovery to a clear decision.

Make the next step understandable before an instruction is submitted.

Retail clients

A personal workspace for markets, order review, funding and activity.

Business desks

Treasury oversight, OTC workflows, team roles and independent approvals.

Connected applications

Banking and other Hybrid applications request execution from Exchange.

ECOSYSTEM ARCHITECTURE

Connected systems. Clear ownership.

Each system performs its own role. A sign-in, match, settlement and proof are different events.

Hybrid ID

Authenticates the person; product and account authority are evaluated separately.

Exchange

Owns execution validation, provider relationships and the Rust matching core.

Core / MPC

Maintain canonical balances, reservations, custody and authorized transfers.

Chain / Explorer

Retain durable evidence and provide its verification.

CRYPTO FIRST

A deployment identity for every network.

The full Core registry drives the catalogue. Missing prices never remove a registered asset.

589 deployments · 17 networks

Verified at the 14 October 2026 release snapshot; counts can change as the registry evolves.

Identity before price

Contract or mint, chain, canonical UUID and precision remain distinct.

Reference coverage

Prices require explicit mappings and valid observations. They are not executable Exchange quotes.

RELEASE POSITION

A clear view of what is ready.

Use each capability in its actual release context. Product demonstrations are separate from financial services.

Available

Hybrid ID, workspace, full crypto catalogue, daily and selected intraday charts, and live USD references.

Demonstrations

Personal trading, business OTC, approvals and guided practice with fictional funds.

Connecting

Private Rust Testnet, canonical accounting, Kafka delivery and authenticated execution access.

Later products

Yield swaps, tokenized equities and barrier products need their own eligibility, liquidity and settlement acceptance.

YOUR NEXT STEP

See the Exchange in context.

Choose a journey, explore a demonstration and review what is available before taking the next step.

Explore

Browse the markets and the personal or business demonstrations.

Understand

Review execution responsibilities, product availability and data sources.

Connect

Use your Hybrid ID or start a business enquiry through the support guide.
