FOR INDIVIDUALS

Know the asset. Understand the trade.

A personal exchange experience starts with clear information and a reviewable instruction.

Discover assets

Browse coins and tokens by exact network identity.

Review a request

Understand the selected asset, direction, quantity, price and costs.

Follow the outcome

Keep acceptance, fills, settlement and evidence distinct.

MARKET INFORMATION

The right asset on the right network.

A familiar ticker is not enough to identify a token deployment.

Network identity

Check the network and contract or mint before a future funding action.

Price context

Read the source observation and freshness label. Missing data stays visible.

TradingView charts

Inspect published daily closes and save exact deployments to your browser watchlist. Streaming follows in a later stage.

ORDER WORKFLOW · DEMONSTRATION

Review before you confirm.

The current trading preview illustrates a workflow using fictional balances and prices.

Market order

Explore a sample order review and fill outcome.

Limit order

Understand a price condition, an open request and cancellation.

Activity

Follow the sample sequence without placing a real order.

IDENTITY & FUNDS

One identity. Canonical balances.

Hybrid ID sign-in does not itself grant trading or withdrawal authority.

Identity

Manage profile and security in Hybrid ID.

Balances

Core records spendable amounts and reservations; MPC manages custody and authorized transfers.

Execution

Exchange must validate eligibility and account permissions before admitting a request.

RELEASE POSITION

A clear view of what is ready.

Use each capability in its actual release context. Product demonstrations are separate from financial services.

Available

Hybrid ID, workspace, full crypto catalogue, daily and selected intraday charts, and live USD references.

Demonstrations

Personal trading, business OTC, approvals and guided practice with fictional funds.

Connecting

Private Rust Testnet, canonical accounting, Kafka delivery and authenticated execution access.

Later products

Yield swaps, tokenized equities and barrier products need their own eligibility, liquidity and settlement acceptance.

GUIDED PRACTICE

Learn the flow before funding.

Explore the personal scenarios with fictional funds and restart whenever you like.

Choose a scenario

Practise funding, trading and following an outcome.

Keep the context

The current browser simulator is a design preview, not the connected Testnet.

Next release

Connected Testnet practice follows real identity, accounting and execution acceptance.
